

I'm a cybersecurity student driven by a passion for helping others protect their systems, data, and digital lives. That passion started back in 5th grade when I stopped a scammer from tricking my mom over the phone, and it's only grown since then. With strengths in harmony, discipline, and positivity, I bring a steady, people first approach to solving security challenges. I've gained hands-on experience through internships in incident response, threat intelligence, and vulnerability management, attended top cybersecurity conferences, and launched ISSA Denver's Student Ambassador Program to help students connect with the industry and gain real leadership experience. I'm excited to keep growing, learning, and helping organizations build more resilient security.
